    optimizer_Adam.minimize(loss)

```

Training might take a while depending on value of Train_iterations

If you set Train_iterations too low the end results will be garbage. 50000 was used to achieve excellent results.

- If you are using a machine with GPUs please set Train_iterations to 50000 and this will run quickly
- If you are using a well spec'ed laptop/computer and can leave this setting Train_iterations=50000 but it will take upto 10 mins
- If you are using a low spec'ed laptop/computer or cannot leave the code running Train_iterations=20000 is the recommended value (this solution may not be accurate)

```
[22]: # Training
Train_iterations=50000
train(sess, Train_iterations,x_tf, t_tf, u_tf,x, t,u_train, loss,
      ↪train_op_Adam, optimizer_Adam)

[23]: u_pred, f_pred=preds
u_pred, f_pred = predict(sess, X_star[:,0:1], X_star[:,1:2], u_pred, f_pred)

error_u = np.linalg.norm(u_star - u_pred, 2)/np.linalg.norm(u_star, 2)
```
